

4-core optical fiber cable Gyta-4b1

Overview

GYTA has a very good watertight performance. This cable can be used for LAN and WAN backbones, telecom access lines, fibre to business and fibre to the building drop connections, as well as fibre to the home drop and access con. GYTA has a very good watertight performance. This cable can be used for LAN and WAN backbones, telecom access lines, fibre to business and fibre to the building drop connections, as well as fibre to the home drop and access connections. Direct buried cable can be buried directly ground in a trench or using a vibratory with great water-blocking and moisture-proof performance, it also has good crushing performance. With metallic central strength offers ease of location while dielectric grounding issues. Duct cables are typically buried, and then the cables are air-blown, jetted, pulled or pushed into the duct. It features high tensile strength and excellent waterproof protection. Usually armored cables are installed under floors in data centers or in rocky soil, as well as to prevent rodent penetration. Aerial Cables are for outside installation on poles where consideration must be given to continual tension from the cable weight as well as wind and ice loads. It can be helically lashed to a messenger or another cable. Self-supporting cables use special hardware to handle the installed tension on the cables caused by the weight of the cab. GYTA is a type of fiber optic cable in stranded loose tube fiber optic cable with compact structure, and the cable jacket is made of strong Polyethylene. High strength loose tube has hydrolysis resistant. Cable filling materials ensure high reliability, and APL makes the cable crush resistant and moisture proof. So, the.
