

AC cable entering the cable tray

Overview

This guide covers the critical steps, from selecting the right electrical cable tray and performing accurate cable fill calculations to managing a safe cable pull through and ensuring all bonding and grounding requirements are met. When completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is bent the minimum bend radius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when. Cables entering equipment from bushed conduit and flanged connections. Code Change Summary: New code language providing specifics on cables and conductors transitioning from a cable tray into the equipment. The following pages address the 2014 National Electrical Code® requirements for cable tray systems as well as design. Southwire Company's Power Cable Installation Guide provides installation information for extruded dielectric power cable systems. 14 AWG through 1000 kcmil, insulated for operation from 600 volts through 35 kilovolts.
