

Amba 505nm Laser Diode Model

Overview

Two OBIS laser models are available at 505nm, at multiple output power options: The LX model can be digitally modulated up to 150MHz, 500kHz analog. Maximum output power models: 20mW, 60mW, 80mW, 100mW, and 150mW. r we develop and manufacture a wide range of diode laser modules that emit laser radiation within the visible spectrum of light and ultraviolet spectrum. Choose between diode lasers with powers up to 300 mW and tunable lasers. Perfect for interferometry, Raman spectroscopy and holography. The OBIS Series laser source systems cover the wavelength spectrum from 375nm (Ultraviolet) to 980nm (near-Infrared), and are perfect for flow cytometry and fluorescence spectroscopy. Pigtailed Laser Diode Modules feature an integrated 1m long, single mode fiber with an FC/PC connector. These laser diodes also feature an integrated driver for plug and play operation, only requiring a 5V external power supply (#73-818).
