

American Optical Cable ADSS

LoRa handheld portable base station

Overview

AFL's ADSS (All-Dielectric Self-Supporting) fiber optic cable is designed for aerial installation without the need for messenger wire. Lightweight, non-metallic, and durable, it's ideal for power utility and telecommunications applications in harsh environments. BEAD/BABA options. Fiber Optic Cable 258 Original Std ADSS Flex-Span ADSS New Std ADSS Applications • Electric utility transmission lines – Typically framed under conductors • EHV environments – Tracking-resistant options available Features • Up to 432 fibers in cable – Gel-Free Buffer Tube options available – up to. All-dielectric self-supporting (ADSS) cable is a type of optical fiber cable that is strong enough to support itself between structures without using conductive metal elements. Its all-dielectric structure allows it to operate efficiently in diverse environments—ranging from high overhead power lines to harsh underground conditions—making it an.

All-dielectric self-supporting cable

OverviewConstruction detailsAccessories and installationApplication issues

All-dielectric self-supporting (ADSS) cable is a type of optical fiber cable that is strong enough to support itself between structures without using conductive metal elements. It is used by electrical utility companies as a communications medium, installed along existing overhead transmission lines and often sharing the same support structures as the electrical conductors. ADSS is an alternative to OPGW and OPAC with lower installation cost. The cables are designed to be s

May 13, 2026

ADSS Cable Manufacturers

High-quality ADSS cables are built to withstand UV exposure, extreme temperatures, heavy winds, and even ice loading. Since they are dielectric, they are non-conductive and safe for installation along
