

# Application of Aggregation Switch Connection

## Overview

They support link aggregation protocols such as Link Aggregation Control Protocol (LACP) and Static Link Aggregation, which allow multiple physical links to be combined into a single logical connection. By bundling multiple network connections into a single high-bandwidth link, aggregation switches help. An Aggregation or "Top-of-Rack" switch is designed to connect everything in a rack at high speeds, then have an even bigger pipe out to the rest of the network. The Pro Aggregation does this with its SFP28 25Gbps ports. "Campus Networks Typical Configuration Examples" provides typical campus network networking modes and a variety of deployment examples. Amounts or summary statistics are used in place of atomic data rows, which are often collected from several sources when data is aggregated.
