A patch panel organizes wires and provides termination points for Ethernet cables running to wall plates in work areas. Twisted-pair cables are used to make patch cables. However, using UTP cables to. Patch panels are one of the best ways to manage an expansive local area network (LAN) by providing quick and easy access to the ports and connections that connect them altogether. They come in a range of sizes, and are typically mountable, whether that's on a wall, or on a rack to make for easier. An Ethernet patch panel is a passive hardware device that terminates and organizes permanent building cabling in one centralized location. They connect things like computers, switches and routers; this helps ensure that data is transmitted and the network can function. Several technical specifications.
