

Brittle Bridge Toilet

Overview

Design-wise, the complex takes on a three-dimensional folded shape, self-supporting itself to create a link between both roads. The edges of the bridge curl outward on opposite ends to meet the main building facade before closing off into two. Design-wise, the complex takes on a three-dimensional folded shape, self-supporting itself to create a link between both roads. The edges of the bridge curl outward on opposite ends to meet the main building facade before closing off into two planters that greet visitors at the entrance. Both male and female toilets are set on the upper floor and a. Amid the farmlands of Gaoqiao village in China's Sichuan Province, the Bridge-Toilet by local office Fengmao Architectural Design (FMD) is part of a rural revitalization initiative celebrating bamboo culture and industry. The project effectively rises next to the Yichangxing Hundred Mile Green Bamboo Corridor, pairing farmers' physiological needs f. FMD approached the Bridge-Toilet project by following the concept of 'connecting and supporting'. On the one hand, the complex needs to creatively accommodate farmers' daily needs and functional facilities for tourists. On the other hand, the practice must adapt to the site's angular layout, whereby the farmland nestles between the roads at a heigh.
