

Cable tray bends when running cables

Overview

Cable tray bends are designed to guide cables around obstacles, changes in direction, or elevations in an electrical system. However, cable tray deformation during installation is a common concern. Such deformations can lead to reduced functionality, safety hazards, and shortened service. This publication is intended as a practical guide for the proper and safe* installation of cable ladder systems, cable tray systems, channel support systems and associated supports. Here are main approaches to either fix or stop drooping: 1. Increase Support Frequency Cutting the space between supports is the easiest way. Although. Cable sag results from incorrect spacing of cable tray supports or from employing the incorrect tray type that is, light-duty perforated trays in high-load applications.
