

Cable tray cut too large

Overview

Cable trays are often treated as an afterthought, which leads to issues like insufficient space or improper routing of cables. Solution: Assess the cable load, tray size, and future expansion needs during the design phase. If the spacing between trays is too large, it can create serious issues. In this guide, we'll explore why the spacing might be too wide, the problems it causes, and practical. Is your cable tray system optimized for safety, dependability, space and cost savings?

Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and. However, every installation is unique, and sometimes it becomes necessary to cut a cable tray to fit specific spaces or to connect different sections. Properly cutting a cable tray ensures the integrity of the system, safety, and compliance with electrical codes. Oglaend System manufacture and deliver Multidiscipline modular bolted support systems, cable trays, cable ladders and accessories for complete installation and containment of Instrument, Electrical, Telecom, HVAC and Piping. When choosing the size of cable tray, it is a tradeoff between the existing volume of cable and the future volume of cable.
