

Cable tray front and back bends

Overview

Cable tray bends are designed to guide cables around obstacles, changes in direction, or elevations in an electrical system. Select the minimum bend radius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require additional protection to support and protect numerous small. We specialize in providing an extensive selection of cable tray bends designed to meet the specific needs of diverse projects, from gentle curves to intricate directional shifts. Our company is a trusted manufacturer of high-quality bends for cable trays, engineered to provide seamless transitions.
