

Cable tray supports and hangers must be galvanized

Overview

Pre-Galvanized Steel: Straight sections, fitting side rails, rungs, and covers shall be made from structural quality steel meeting the minimum mechanical properties and mill galvanized in accordance with ASTM A653 SS, Grade 33, coating designation G90. The material of a cable support system is normally steel or stainless steel. Various galvanisation surfaces can be applied to improve corrosion protection. A cable support system consists of cable support lengths and system components, such as cable support fittings, support elements, mounting. Cable trays play a vital role in supporting electrical cables and wires in commercial, industrial, and utility installations. One of the most recognized frameworks globally is the IEC standard for cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. Cable ladder systems and cable tray systems are designed for use as supports for cables and not as enclosures giving full mechanical protection. They are not intended to be used as ladders, walk ways or support for people as this can cause personal injury and also damage the system and any. , ABB offers steel cable tray with pre-galvanized and hot-dip galvanize lvanization is an economical and effective way to protect steel ag tal, naturally oxidizes when exposed to air, but at a much slower rate than steel. Zinc provide sacrificial protection, which means that it cor-odes while. B. Cable tray systems are defined to include, but are not limited to straight sections of [ladder type] [trough type] [solid bottom type] [channel type] cable trays, bends, tees, elbows, drop-outs, supports and accessories. ANSI/NEPA 70 - National Electrical Code.
