

Cable tray swaying from side to side

Overview

Cable sag results from incorrect spacing of cable tray supports or from employing the incorrect tray type that is, light-duty perforated trays in high-load applications. Complicating the problem are overloaded trays and large unsupported spans. Safety questions and cable damage can follow from this. Here are main approaches to either fix or stop drooping: 1. Although. As you can see from the image illustrated below ☐ I have a set of cable tray run in my model which I need to change their rotation by 180 degrees. Under. 1 - the cable tray shouldn't be upside down, it should have been installed in a way that the cables can flow into panel from up top. This guide discusses common cable tray problems, from loosening and corrosion to grounding issues and installation errors, along. Running the trays on edge requires that you secure every cable to every rung of the tray. or, worse, not quite cutting through it.
