

Cable tray tilted down 90 degrees

Overview

This model is a vertical 90 degree down-turn bend transition tray. Connects to any ASP cable tray with splice clamps provided. Standard depth is 4" with optional depth of 6". Construction of a flat 90° bend (A) The amount of tray lip to be removed is equal to 2, 3/4 the width of the tray, half of this measurement will be removed on either side of the centre line. To remove the lip we can use a small hand grinder (B) or a file. There are situations when I need to change the elevation of a cable tray by a small value (ex: 5cm / 2 inches) and in this value I cannot fit two 90° elbows. How can I change this vertical fitting angle to another value (ex: 30°)?

I know I can do this from an elevation view, but that is not very. Fittings, cable trays, screw connection - Vertical bends, screw connection.
