

Cable trays and ventilation pipes

Overview

Cable trays are ideal for high-volume runs in open spaces where ventilation is key, while trunking suits areas that demand a clean, enclosed, and modular layout. For environments exposed to moisture, dust, or physical hazards, conduits offer unmatched protection and. Do you wonder if poor airflow in your cable trays could be causing problems?

Many modern buildings rely on cable trays to carry a lot of power and data lines. But with more and more cables and longer use, cables getting too hot is a big issue. This isn't just about cables not lasting as long; it. Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. Unlike conduit systems, cable trays allow cables to be laid in bundles, improving accessibility, heat. Understanding the types of cable containment systems, including trays, trunks, and conduits, helps engineers and contractors select the best solution for performance, safety, and compliance. Each system offers unique benefits depending on the environment, cable load, and future accessibility. Combining local manufacture and distribution with an extensive product range, these facilities ensure we. Armorduct Systems are a UK manufacturer of steel cable management systems including cable trunking, tray, basket, floor boxes, power track & more.
