

Can the distribution box rails be grounded

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Each DISTRIBUTION BOX and controller must be grounded. In factories, construction sites, and even commercial buildings, this question pops up all the time. Your boss might insist on it, while your. Safety of Personnel: By safely channeling fault currents into the ground, proper grounding helps to reduce the risk of electric shock to personnel. This helps to reduce the potential difference that exists between conductive parts and the earth. Preparation: First, you need to prepare some necessary tools, including grounding wire, grounding rod, voltmeter, insulating gloves and insulating tools. Flexible Connection: Braided copper tape. The bottom edge of the distribution box is usually between 1. The fixing method should be firm and reliable to avoid movement or tilting of the box due to vibration or collision.
