

Cantilevered distribution box equipment

Overview

Cantilever racking is a specialized system designed to store long goods or items of varying lengths, such as beams, pipes, metal, plastic, or wooden boards. This racking system features columns with horizontal arms to support the load and is available in single- and double-sided. Dock boards create a smooth transition between a trailer or shipping container and loading dock to ensure loads can be moved safely over loading dock gaps, curbs, and other obstacles. Bluff dock boards ensure safety, longevity & productivity. Explore over 500,000 items in stock at our UK & European warehouses ready for immediate despatch. Made in the UK with a lighter carbon footprint than other imported products. Quick to install and relocate, CantiDeck systems solve vertical logistics challenges by reducing crane movements. Q: What is the seismic performance of the distribution box enclosure?

A: The seismic performance of the distribution box enclosure depends on the enclosure material and structural design. pipes, plates, boards and rods?

If so, it is essential that you have a good look at STILL's cantilever racks.
