

Communication tower rainstorm

Overview

The Transmission Company of Nigeria (TCN) has declared a force majeure on its Ikeja West-Osogbo 330kV transmission line following the collapse of a key tower during a severe rainstorm on Thursday, 16 April 2026. Building communication towers involves a lot of important steps. Unpredictable weather can pose logistical challenges to any of these steps and result in several risks. Understanding how weather affects communication tower. Whether it is the lattice towers, monopole towers, or guyed masts rising more than 200 feet into the air, they must be well maintained to ensure consistent service to the millions of U. Communications antennas often are mounted on towers or masts at heights. Typhoons and tornadoes are the most direct threats to communication towers. In a statement released on Sunday, April 19, signed by TCN General Manager Public. Tropical countries with high rainfall, are vulnerable to rain attenuation at high frequencies, such as those used in 5G and 6G technologies.
