

Configuration of Aggregation Access Switch

Overview

Configuration involves setting up VLANs, QoS policies, security rules, and routing protocols. This process typically requires technical expertise and a thorough understanding of networking concepts. Consult the switch's documentation and consider seeking assistance from a qualified. Aggregation and access devices downstream to the core layer can automatically go online through Zero Touch Provisioning (ZTP). This section describes three automatic deployment modes, which can be selected based on the site requirements. Access switches are utilized to increase port count for layer 2 access to wired devices and access. IEEE 802.3 Aggregating multiple links between physical interfaces creates a single logical point-to-point trunk link or a LAG.
