

Configuration of fiber optic switch end devices

Overview

Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Direct attach cables with pre-terminated SFP connections may also be used. Download the Application. This chapter provides information about Fibre Channel interfaces, its features, and how to configure the Fibre Channel interfaces. Your software release might not support all the features documented in this module. For the latest caveats and feature information, see the Bug Search Tool at. An Ethernet fiber switch is a networking device that enables data transmission over fiber optic cables rather than traditional copper cables. Simply put, it defines how network. Fiber optic cabling is increasingly used to connect network switches and other datacom equipment, especially in long-distance and mission-critical applications. They are used in a wide range of applications, including telecommunications, data centers, industrial automation, and military and aerospace.
