

Connect the PoE network cable to a non-PoE switch

Overview

The connection method is: Non-PoE switch → (network cable) → PoE injector → (network cable) → PoE terminal. The injector provides power, and the switch only processes data. As long as the port is configured for standards compliant 802. It allows compatible devices, such as VoIP phones, network surveillance cameras or wireless access points to work in places where power outlets or network connections don't exist. PoE devices are network equipment that can send out or receive the PoE power along with data, such as PoE switches, IP cameras, wireless access points, while non-PoE devices can only. And what happens if you accidentally plug in a normal (non-PoE) device into a PoE switch?

I explore all this – and more – in this video. including via a VERY suspect looking demo! I combined TWO power over Ethernet switches with three non-PoE devices (a HP printer, DVD player and TP-Link Gigabit. possible duplicate of Can I connect a PC to a PoE switch?

, Is it harmful to plug a POE energized data source into non-POE NIC card?

No, you won't damage those devices. There are occasional posts to the contrary online but for the most part it seems that PoE is only activated after an initialization. If I put a POE switch at the end - right after my patch panel (after I've identified which ethernet cables are which) for the church/kitchen and would that provide POE power to the phones they will have?

The switch does have 10GB SFP on it as well.
