

Construction site primary power distribution box cable trench

Overview

Trench length should be limited to 20 feet (inside dimension), with the service cable length limited to less than 50' from transformer to customer panel. Pad placement and the switch board pull section should maximize trench window space. nment staking for all trenching, as wel r padmount transformers, secondary joint-use pedestals or street light screw-in bases. In addition, special care must be taken during landscaping, to located on boulevards must be laid at a minimum depth of 1. Where cables fill the. Primary distribution systems consist of feeders that deliver power from distribution substations to distribution transformers. Customer shall install conduit, backfill, 3 phase transformer pads and APS provided equipment pads/box pads, pul es, J-Boxes and manholes. Please ensure that you can provide a suitable storage area for all materials as you could be liable for a these are stored in a suitable location and kept dry. Air Insulated Substation, is a substation where: high voltage.
