

Copper wire strips in the distribution box

Overview

The copper coil strip or sheet for distribution boxes is used to install the copper between the box and the wall. It consists of a single layer of copper with thick threads running through it, which is then covered in plastic covers to protect against damage. Copper strip is a malleable, thin sheet of pure copper or a copper alloy, meticulously rolled down to a precise thickness to provide a versatile and highly conductive material suitable for an array of industrial and technological applications. High conductivity, secure wiring solutions. These bars are tin-plated copper and have stainless steel terminals. They are also used to connect high voltage equipment at electrical switchyards, and low voltage equipment. We supply high quality rolled copper for electrical applications and general use.
