

# Data Center UPS Row Integrated Power Distribution Cabinet

## Overview

Space-saving power distribution options for your data center enable you to easily deliver power from your UPS power supply to wherever you need it. Slim 12" enclosure, two 400Amp feeds server cabinet rows. Panels have 42-pole breaker positions for A&B service. The design is based on the customer deploying IT equipment with redundant power supplies sometimes referred to as dual corded loads. The system plus system design has proven reliability, but. The modular data center indicated here is built with a number of racks, UPSs, power distribution cabinets, power distribution units, air conditioners (in-row cooling) and more equipment that provides network, cabling, and monitoring functions and operates independently. All components of the module. Tripp Lite has Network Tools & Testers to help you build a network, including crimping and punchdown tools, as well as cable testers and PoE signal testers. Learn More Rack-mounted and desktop switches provide up to 24 Gigabit Ethernet ports, with or without PoE. With best-in-class efficiency and redundancy design, Delta's UPS allows the greatest level of availability, scalability, and. a center productization, productization reliability up to 99.
