

Distribution box live and neutral wire indicator

Overview

Identification of markings: In the meter box, there are usually corresponding markings on the holes for the neutral and live wires, such as "L" representing the neutral wire and "N" representing the live wire. The wiring color codes are the standard safety language of electricity. They make it easy to identify immediately which wires are live, neutral, or grounded (avoiding costly mistakes and hazardous accidents). more Have you ever opened an electrical box only to find all the wires are the same color?

Don't guess and risk a short circuit! In this. Eaton's heavy-duty safety switches with viewing windows and integrated voltage indicators provide a safer switching solution. The latest offering in Eaton's enhanced safety switch devices, these products combine a visible disconnecting means with permanently installed indicators that illuminate. The distinction between live (hot) and neutral conductors is paramount for both personal safety and the correct function of any home electrical project.
