

Distributor Aggregator Switch NRZ

Overview

High-availability Aggregation Switch with Redundant Fans distributor, Achieve greater efficiency and speed with Layer 3 managed switches equipped with 10G uplink. Perfect for demanding environments where performance is key. Long-distance installations often require fiber optic cables to connect different sites because of. An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. When integrated with Cambium Networks access points and cnMaestro™ Network Management, cnMatrix delivers a unified wired and wireless enterprise network that's secure, scalable. Supporting the continuing growth in the bandwidth demand and datacenter traffic driven by networking and AI/ML requirements, the QSFP-DD (Double Density) Interconnect System delivers 8 lanes with up to 28 Gbps NRZ or 56 Gbps-PAM4 (up to 400 Gbps aggregate) in a compact footprint that is backward. The LinkX® 400GbE QSFP-DD portfolio consists of straight and splitter DACs, an AOC cable and five transceivers with reaches from 1-to 10k-meters. QSFP-DD cables and transceivers support only Ethernet.
