

Do mesh cable trays need fixed supports

Overview

Wire mesh cable tray should be supported every 5' or less in accordance with ANSI/EIA/TIA-569-C. Supports may be located directly under splices or intersections if recommended by the manufacturer's installation instructions. The cable support lengths and fittings can basically be designed as cable trays, cable ladders or mesh cable trays, in which cables are routed. Cable ladder systems and cable tray systems shall be manufactured in accordance with BS EN 61537, channel support. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. When properly selected and installed, cable trays simplify routing, improve accessibility, and support future expansion while. First and foremost, a cable tray must act as an effective and durable support for cables.
