Drilling holes to fix the cable tray bracket

Overview

Drill the drill holes with ∅ ≥ 7 mm in the tray rail and tray base. To avoid transverse bending at higher loads, a joint plate must be used for tray widths of 400 mm or more in the joint area of the cable trays that are to be connected. Recommendation: For side height 60 mm = 4 screws per. Welcome to Engineerings. w!In this video, watch the complete process of installing a cable tray on site — from climbing the ladder, drilling holes, fixing raw. Structural building members should never be cut, and cable trays should not be installed in hoist way or where subject to physical. Drill the hole accordingly and use pop rivet to fix both cover and HD cover clamp together. Place the clamp at the centre of the HD cover clamp channel. Insert wall anchors (expansion bolts for concrete). Secure the cantilever brackets to the wall, ensuring. At Prime Cut Diamond Drilling, we support electricians, M&E contractors, and containment specialists by providing clean, accurate penetrations exactly where needed.
