

Ecuadorian Arch Bridge

Overview

Located at the centre of a new esplanade in Guayaquil, the newly constructed and architecturally striking pedestrian bridge has a main span of 37.44m long access ramps on either side. The bridge deck varies in width between 4. This table presents the structures with spans greater than 100 metres (330 ft) (non-exhaustive list). "International Database for Civil and Structural Engineering". The arched footbridge Malecón is, because of its particular form – single truss with extended deck, inclined arch, curved bridge deck and positioned on a tripod – a particular challenge to design, calculate and produce. Darwin's Arch collapsed Monday, leaving two pillars about half a mile from Darwin Island in the Galapagos Archipelago. Photo courtesy of the Ecuadorian Ministry of Environment and Water May 18 (UPI) -- A rock formation in the Galapagos known as Darwin's Arch collapsed this week as the result of.
