

Features of Irish Trough Cable Trays

Overview

Solid non-slip ductile iron covers (quick and easy to remove and re-fit) have been designed with pre-fitted removable steel caps to provide cable/pipe entry points in flexible locations along the ducting system. Cable troughs are convenient systems for providing safe, secure and practical management of electrical cables, pipes and other service utilities. Cables and utilities installed within. PROtrough is an innovative, lightweight, fire retardant cable trough system that offers a modern alternative to traditional concrete trough systems for rail, light rail and power markets. Far superior to traditional conduit in many applications, cable tray systems offer unparalleled accessibility for maintenance. A Trough Cable Tray looks like a continuous “U” shape. It has a solid bottom and two side walls. This helps with cable ventilation to manage heat. All lids are rated in accordance with the loading groups specified in BS EN 124.
