

Features of the 18-Box Type Optical Splitter

Overview

Engineered with premium PC+ABS materials, it combines fiber splicing, optical splitting, centralized storage, and cable management capabilities for streamlined network deployment. The integrated 1:8 PLC splitter eliminates external components, reducing installation complexity. The OSP 1812, OSP 1812 M and OSP 1814 are compact optical splitters used to split or combine fiber optic signals. OSP 1812 M: One input and two outputs, one at 90% power and a second at 10% power. Typically used as a monitoring output. These yellow briks are passive in operation, they require no. The box shaped optical passive splitter that is designed for fiber optic distribution boxes and closures, uses PLC (Planar Light-wave Circuit) to distribute the optical power 1 input to desired number of ports with a compact body. The Box type design, can easily be placed into optical fiber distribution box, optical fiber junction box or many kind of box. This advanced fiber access termination box delivers comprehensive FTTx network infrastructure in a single, weatherproof enclosure. The optical. It's a kind of ODN product suitable for PON networks that can be installed in the pigtail cassette, test instrument and WDM system, it minimizes the space occupation. Bare fiber splitter is relatively fragile on fiber protection and need a complete protection design on carrying box body and device.
