

Fiber Optic Cable Identification Instrument

Overview

Fiber Inspection & Identifiers include essential fiber diagnostic tools and fiber signal identifiers for maintaining network performance. AFL's optical fiber identifiers (OFIs) are rugged, easy-to-use test instruments that detect the presence of signals on optical fibers. An OFI is an important tool for field technicians – assuring. Fiber optic cable is a type of cabling that contains one or more optical fibers for transmitting data at high speeds and/or over long distances using light. It saves time and money when compared to other pieces of more elaborate test equipment. They are commonly used to positively identify fibers to avoid accidentally disconnecting live systems, and for general checking of continuity, faults le to use with one hand. They can detect a variety of optical tones, which can be provided by any ingfisher laser source.
