

Fiber optic cable continuity

Overview

The principle reason for testing fiber optic cable is to verify continuity and look for attenuation. These factors significantly add to the fiber optic network's long-term performance, manageability, and. Before installing your fiber optic network, one of the most important steps you can take to ensure data will be transmitted properly, is to test your cables and connectors for continuity. As the components like fiber, connectors, splices, LED or laser sources, detectors and receivers are being developed, testing confirms their performance specifications and helps. Testing fiber cable quality is a mandatory engineering process, not an optional best practice. Quality verification ensures that optical fibers meet attenuation, continuity, geometry, and mechanical integrity requirements before being placed into service. In FTTH, ODN, and data center deployments.
