

Fireproof sealing only applies to the inside of the cable tray

Overview

When cable trays pass through walls or floors, seal openings using fire-rated penetration sealing materials. Do not modify or damage the tray coating or structure during use. Inside a non-combustible fiberglass casing, a high-density concentrate of intumescent components, inert thermal insulators and products with gradual release of. This document outlines the key requirements for cable tray layout, installation, and fireproofing in industrial and commercial environments. Route Planning and Layout Principles Coordinate with Building Structure: Cable tray routing should align with architectural design, avoiding unnecessary. Fireproof cable trays are specialized structures designed to support and protect cables. Suitable as a fireproof penetration sealing system for electrical cables and lines of all types, electrical installation conduits, and HVAC split. Therefore, it is crucial to set up fire-blocking sections (fire sections/fire partitions) on cable trays and select appropriate fire-blocking sections (fire sections/fire partitions) materials.
