

G652 Fiber Single Mode

Overview

G.652 is an that describes the geometrical, mechanical, and transmission attributes of a optical fibre and cable, developed by the of the (G.652 is an that describes the geometrical, mechanical, and transmission attributes of a optical fibre and cable, developed by the of the () that specifies the most popular type of (SMF) cable. G.652 was originally developed in 1984 by ITU-T Study Group XV. Subsequently, revisions were published in 1988, 1993, 1997, 2000, 2003, 2005, 2009, 2016, and 2024 (from 1997 as Study Group 15). The standard specifies the geometrical, mechanical, and transmission attributes of a single-mode optical fibre as well as its cable. The fibre has zero-dispersion wavelength around 1310 nm as per how it was designed, however it can also be used in the 1550 nm wavelength region.
