

High-voltage complete set of equipment charging piles

Overview

The main unit of the charging pile features a wide power output range from 480 kW to 1680 kW, supporting intelligent dynamic power distribution according to the actual charging demand of connected vehicles. The system can be equipped with a flexible number of charging terminals, with. Charger piles are the core equipment of new energy vehicle charging stations and an upgrade over traditional products. The external charger converts input external alternating current (AC) into direct current (DC) power mode required by the EV ecosystem and stores it in the battery. Chauron Technology offers comprehensive solutions for charging pile equipment, delivering reliable overcurrent, short circuit, and electric arc fault. Equipped with a high-efficiency DC charging module featuring intelligent power distribution. The main body adopts a high-strength steel structure with excellent sealing performance.
