

How many doors does the optical distribution box have

Overview

The box serves as the separator for indoor and outdoor cabling in the FTTH-network. 5 cable entrances with membrane sealing. Wherever glass fiber connections have to be installed in a harsh environment - in offices, industry or Fiber-to-the-Building/-Home customer access networks - high demands are made on the value and flexibility of the distributor housing and easy access whilst installation and maintenance. The Belden's DCX Optical Distribution Frame (ODF) Cabinets are fully configurable, front access cabinets that serve as a high-density fiber interconnect or the main building block for a large fiber cross-connect. They protect connections with a lockable front door and side panels that can be unclipped. Door and Closure: The box should have a secure door that can be easily opened and closed. The door should latch securely to prevent accidental openings, yet allow for easy access when needed. -. Fiber distribution box is suitable for the wiring connection of optical cable and optical communication equipment, through the adapter in the wiring box, the optical jumper leads the optical signal, and realizes the optical wiring function.
