

How many years can outdoor fiber optic cables typically last

Overview

If installed and protected correctly against technical and environmental conditions, they can last: 25–50 years (outdoor plant infrastructure, long-haul wiring) 15–30 years (indoor building wiring systems) 10–20 years (FTTH plant drop near customer premises) If installed and protected correctly against technical and environmental conditions, they can last: 25–50 years (outdoor plant infrastructure, long-haul wiring) 15–30 years (indoor building wiring systems) 10–20 years (FTTH plant drop near customer premises) The industry standard says Fiber Optic Cable Lifespan should last 25 years. But ask any veteran network engineer, and they will tell you a different story. Others, installed in the 1990s, are still running. From FTTH optics to industrial applications, backbone transmission, and cloud data centers, fiber cables can last for decades under appropriate installation and handling. We often hear that fiber optic cable lasts "a lifetime."
