

How to Choose Drop Optical Cable

Overview

While the physical cable outer casing is protective for the cable, the fiber inside must offer better optical quality. Use cables with minimal attenuation (loss of signal) so that there is quick and reliable data transfer. While backbone and distribution networks get the most attention during planning, the success of the entire architecture rests on the most fragile link: the fiber optic drop. The optical fiber drop cable is one of the most critical things that ensures the quality of any network, particularly FTTH or FTTB networks. These cable bridge the gap between an ISP's backbone infrastructure and end-user premises, enabling high-speed internet, voice, and data service in residential. Indoor FRP Drop Cable GJXFH is a non-metallic, flame retardant, indoor fiber optic cable designed for use in fiber-to-the-home (FTTH) applications. This fiber cable is usually sheathed in a polyethylene jacket, which gives it superior crush resistance.
