

How to adjust network speed on a fiber optic switch

Overview

The speed command is utilized to set the operational speed of the switch port, with options including 10, 100, or 1000 Mbps. Example: Setting a port to 100 Mbps ensures compatibility with devices that support this speed, enhancing network efficiency. SFP connect with this port is 1000base-LX, while at some. This tutorial will explain the steps required to configure fiber optics on a Cisco switch and ensure proper connectivity in your network. Full-duplex allows simultaneous transmission and reception of data, while half-duplex allows only one direction at a time. Once you understand the basic concepts, you can check out my Recommended Equipment section toward the bottom of the. Beginner's introduction and guide on how to install and set up a Fiber Optic network cable in your home or office.
