

How to connect a fiber optic cable to a transceiver circuit

Overview

Remove protective caps from optical fiber connectors, insert optical fibers into the optical transceiver, and connect the fiber to the peer device. Ensure that the Tx and Rx ports are correctly connected. Most systems operate by transmitting in one direction on one fiber and in the reverse direction on another fiber for full duplex operation. The USG supports both 1 Gbit/s, 10 Gbit/s, and 40 Gbit/s optical modules., 1G, 10G. Before you begin to install a transceiver in a QFX5700 line card, ensure that you have taken the necessary precautions for safe handling of lasers (see Laser and LED Safety Guidelines and Warnings). To install a. In fiber optic circuit technology an optical fiber link is used for transferring digital or analogue data in the form light frequency through a cable which has a highly reflective central core.
