

How to connect a jumperless optical cable splice box

Overview

OPGW cable joint box installation involves several key stages: selecting the appropriate location, preparing both the cable and the joint box, splicing fibers, and sealing the joint box properly. Adhering to these steps ensures optimal performance and longevity of the. For the specific method, please follow the standard method and steps recommended by the optical cable manufacturer, and the prepared length is 3m. Clean the loose tube and the reinforcing core sheath with detergent, remove the excess filling tube, and use the provided sandpaper to polish the. This document describes the installation of optical fiber with both single fiber and/or ribbon fiber splices into Optical Splice Enclosure (OSE) metal splice trays (Figure 1). Make sure you read and understand this instruction as well as instructions provided with related assemblies before. While connectors can be quickly disconnected and reconnected, splice connections create permanent, low-loss transitions between different fiber optic cables. While a poorly. remove the front door of the unit. Place the WSB cab on the mounti ar ware and tighten t ine how the cable will be routed.
