

How to set a safe distance from the distribution box

Overview

What should the distance be between the floor and the distribution board or main switch?

Approved Document M of the Building Regulations states that consumer units/fuseboxes should be mounted so that the switches are 1350-1450mm above floor level. Choose the right box based on environment (indoor/outdoor), load capacity, and durability. Check for proper IP/NEMA ratings and material quality. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. Practice good wiring: secure. A cable distribution box is an electrical device used to collect, distribute, and protect electrical power. Generally, distribution boxes can be divided into three levels of secondary protection, that is, three levels of distribution boxes: general. Knowing the distance between a distribution box and the septic tank is critical for proper wastewater management.
