

How to wire the SPD in the distribution box

Overview

Use AWG #10 stranded wire or larger (which is readily available and easily installed) to connect between the SPD and the breaker panel. In this blog, we'll walk you through a real-time installation of a Type 1 Surge Protection Device (SPD), giving you a first-hand look at the process. Surge Protection Devices are crucial components in ensuring the safety of electrical systems, especially in commercial and residential settings. more In this informative YouTube video, we. Surges may occur due to lightning strikes, power interruptions, or grid switching activities, causing a sudden spike in voltage that can damage devices, interrupt operations, and pose safety risks. The main purpose of an SPD is to redirect excess voltage safely to the ground, preventing harm to. Can you use one SPD for the whole building?

You should put your SPD very close to the main busbar in the distribution box. The right setup keeps electronics. Drill and punch a hole in the SPD housing in a position to minimize the length of the connecting wires from the lugs of the SPD to the circuit breaker in the adjacent panel (or fused disconnect lugs). The connecting wires do not carry supply current.
