

Huawei optical module DWDM

Overview

This enhanced small form-factor pluggable (eSFP) module supports a data rate of 2.5G and operates on a single-mode fiber with a wavelength of 1560. Huawei has started shipping its next-generation high-performance coherent DSP in the first quarter of 2026 as an embedded assembly in a muxponder with two ports of 2. Real-time monitoring and intelligent diagnostics on the network at every level every time, covers service, optical channel, fiber failure. DWDM optical module technology powers the internet like a blazing engine. The arrival of electro-absorption modulated lasers (EML) supercharges this. Transceivers convert electrical signals into optical ones, providing stable and fast data transmission over the required distance (from several hundred meters to hundreds of kilometers). Some transceivers have an RJ-45 interface and are designed to connect a twisted pair.
