

Installation location of optical cables within the station

Overview

Optical cable is usually placed in a 25 to 40 mm inside diameter (ID) sub-duct which is placed into an existing larger diameter communications conduit. Most communications conduits can be fitted with three or four sub-ducts. Sub-ducts are often referred to as innerducts. The Fiber Optic Association, Inc. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. Turn-backs and all sharp changes of direction. In any cable deployment, whether it is optical fibre or any other type of cable, it should be considered the considerable number of tasks related to the manipulation and laying of the cable. Cable laying needs to be preceded and followed by specific steps to have successful installation. Failure to follow these guidelines may result in damage or attenuation increases of the optical fiber or cable.
