

Intelligent Control and Management System for Distribution Boxes

Overview

Intelligent distribution boxes integrate sensors, monitoring systems, and remote management modules to achieve real-time monitoring and automated control of current, voltage, power, and load status. Digital technologies such as Cloud Computing, Big Data, Internet of Things (IoT), Artificial Intelligence (AI) and Industry 4.0 are phenomenon which are changing the world we are living in. Background Traditional distribution boxes are difficult to implement remote monitoring due to. Combining machine-level sensors, smart controllers and connected devices, The Connected Distribution Center gathers data from key inputs to deliver vital information on asset health and facility performance in real time. Ensure an efficient, stable, secure and sustainable power supply and. Fault Detection and Alerts Advanced monitoring systems can instantly detect faults such as overloads, short circuits, or ground faults. Upon detection, automated alerts notify maintenance teams via SMS, email, or mobile apps, enabling rapid response to prevent damage or outages.
