

Intelligent Solution for Power Supply Systems at Indonesian Telecom Sites

Overview

The solution incorporates a Software-Defined Power (SDP) architecture that enables you to manage 'Watt with Bit.' It also maximizes operations and energy efficiency. 1380 focuses on smart energy solutions for telecom sites, mainly on the performance, safety, energy efficiency and environmental impact, when the system is fed by various types of energy such as photovoltaic (PV) energy, wind energy, fuel cells and the grid. The Huawei has integrated information and interconnection technologies with power electronics to create the Smart Site Solution — a solution that digitalizes and interconnects intelligent network facilities. Leveraging advanced technology, proven operational expertise, and a nationwide delivery network, we enable clients to optimize energy. This technology catalogue is a result of the close cooperation between Indonesian and Danish Government under the Indonesian-Danish Energy Partnership Programme (INDODEPP). Gratitude goes out to everyone involved from DG Electricity, Danish Energy Agency, Embassy of Denmark in Jakarta and Ea Energy. As per Market Research Future analysis, the Indonesia Telecom Tower Power System Market size was estimated at 123. The Telecom Tower-power-system market is projected to grow from 134.8 billion by 2031, at a CAGR of 10.
