

Is the MNS low-voltage distribution box safe

Overview

One of the most significant advantages of MNS low-voltage switchgear is its enhanced safety features. MNS systems incorporate advanced technology that minimizes the risk of electrical faults. They often have built-in protection mechanisms, such as arc flash and overload protection. The choice of MNS® will be the right decision. When sourcing low voltage switchgear systems from ABB, customers can be assured they are buying the same high-quality design regardless of the factory from which they order, as ABB engineers and project managers collaborate using a global design platform. MNS Low-Voltage Switchgear is designed to distribute and control electrical power safely and effectively. PDUpro brings flexibility to critical electricity distribution targets. Due to the modular structure, the unit can be extended or altered according to the user's changing needs while other circuits are in use.
