

Is the wireless access point connected to the access switch

Overview

A switch connects devices such as a desktop, laptop, and access point to the router. Network Switch: A switch is a physical device used to connect multiple devices on a local area network (LAN), facilitating communication by forwarding data packets to each MAC address of connected devices in an efficient manner. Wireless Access Point (WAP): A WAP allows wireless devices to connect. I have 2 netgear unmanaged switches and a netgear wifi repeater/access point. An access point connects a device wirelessly. In this tutorial, we'll try to explain the concept behind each of these terms and. Can I use a switch with a wifi access point?

I'd like to have wifi in my garage since we're always out there working on some project or another. Could I just get a little 5 port switch, and plug the computer and the router into. Access points and wireless LAN cards connect devices in a network using radio signals.
