

Maximum transmission distance of Huawei s 850nm multimode optical module

Overview

With a wavelength of 850 nm and a maximum transmission distance of 300 meters, this module is optimized for data centers, enterprise core switches, and high-performance computing networks that require low latency and high throughput. You can use different levels of 1. 25 Gbit/s SFP/eSFP optical modules with GE interfaces and 10 GE interfaces. When used with multimode optical fiber (LC/PC-LC/PC OM2), the transmission distance can reach up to 550 m, the transmission. The 850nm 0. 3km MM HXB is a Huawei high-quality 10G SFP+ transceiver, engineered for short-range, high-speed data transmission over multimode fiber (MMF). Compliant with 1000base-SX standard. Leveraging VCSEL (Vertical-Cavity Surface-Emitting Laser) technology, 850nm modules offer low power consumption, high compatibility, and strong performance for distances up to several hundred meters. Why Choose the 850nm Wavelength?

Industry Standard: IEEE 802. 22 km Transmitter Optical Characteristics Center wavelength : 850 nm Maximum Tx optical power : -2.
